SUMMARY

Detail - oriented QA Engineer with 6+ years experience in Functional and Non - Functional testing for Web applications with Medical background. Contribute to all aspects of the testing process: planning, creating test documentation, test execution, defect tracking, and performing testing. Take ownership and deliver results for assigned tasks. Built trusted relationships with the Scrum team by catching issues at the early stage. Strong problem-solving skills, ability to learn new technologies, and excellent attention to detail.

Credo: Perfection is the goal, and satisfaction is the result

| • Postman | • ArgoCD | | • Java | • JMeter |
| • Jira | • Cucumber | | • JavaScript | • Selenium IDE |
| | • Gherkin | | • Selenium Webdriver | |
| | • Newman | | | |

EXPERIENCE

ChilliPharm, London, UK - *Software QA Engineer*

APRIL 2020 - PRESENT

- Take ownership and deliver results for assigned tasks
- Utilize DevTools, ArgoCD logs to analyze issues and isolate the root cause
- Focus not only on Positive testing but perform Negative and non-standard user behavior testing
- Reproduce prod defects, triaged their root causes, report, and track them in Jira
- Decrease time in Manual Testing by creating basic API scripts using Postman and run them through Newman
- Monitor automation results and manually replicate failed Test Cases to isolate real issues
- Analyze the product and design requirements in Figma to find gaps, inconsistencies, and clarify the product requirements in early stages without access to application and provide feedback to Product Owner
- Attend all Scrum meetings and prioritize issues during Grooming sessions
- Participate on the release preparation documentation
- Decrease number of prod defects by fleshing out the edge case scenarios at an early stage

InfomatrixGlobal Inc, Denver, CO - *Software QA Engineer*

SEPTEMBER 2017 - APRIL 2020

- Improved product quality by making recommendations for testing process
- Partnered with the dev team in debugging process and issue escalation
- Design and execute Test Cases in VSCode using Gherkin language based on user requirements and acceptance criteria

- Performed Validation testing before release, as well as Regression, Functional and Non-Functional testing(Exploratory, UX/UI testing, etc) and Acceptance Testing on prod after release
- Worked closely with Scrum team members to review TMX, FRDS, URS, Test Plans, Test Cases
- Knowledge transfer to other QA - team members
